

**SUMMARY OF FINANCIAL IMPACT OF THE PROPOSED AIR
LIQUIDE LARGE INDUSTRIES US LLP PROJECT ON THE
FINANCES OF THE LA PORTE ISD UNDER A REQUESTED
CHAPTER 313 PROPERTY VALUE LIMITATION**

February 23, 2010

Final Report

PREPARED BY

Estimated Impact of the Proposed Air Liquide Large Industries US LLP Project on the Finances of the La Porte ISD under a Requested Chapter 313 Property Value Limitation

Introduction

Air Liquide Large Industries US LLP (Air Liquide) has requested that the La Porte ISD (LPISD) consider granting a property value limitation under Chapter 313 of the Tax Code for a steam methane reformer (SRM) that is used to produce industrial gases. An application was submitted to LPISD on January 22, 2010. Air Liquide proposes to invest \$235 million to construct the new industrial gas manufacturing project in LPISD.

The Air Liquide project is consistent with the state's goal to "encourage large scale capital investments in this state." When enacted as House Bill 1200 in 2001, the original language in Chapter 313 of the Tax Code made companies engaged in manufacturing, research and development, and renewable electric energy production eligible to apply to school districts for property value limitations. Subsequent legislative changes expanded eligibility to clean coal projects, nuclear power generation and data centers, among others.

School Finance Mechanics

Under the provisions of Chapter 313, LPISD may offer a minimum value limitation of \$30 million. Based on the application, the qualifying time period would begin with the 2011-12 school year. The full value of the investment is expected to reach \$213 million in 2012-13, with depreciation expected to reduce the taxable value of the project over the course of the value limitation agreement.

The provisions of Chapter 313 call for the project to be fully taxable in the 2011-12 and 2012-13 school years, unless the District and the Company agree to an extension of the start of the qualifying time period. For the purpose of this analysis, it is assumed that the qualifying time period will be the 2011-12 and 2012-13 school years. Beginning in 2013-14, the project would go on the local tax roll at \$30 million and remain at that level of taxable value for eight years for maintenance and operations (M&O) taxes. The full taxable value of the project could be assessed for debt service taxes on voter-approved bond issues throughout the limitation period, with LPISD currently levying a \$0.285 per \$100 I&S tax rate.

Under the current school finance system, the property values established by the Comptroller's Office that are used to calculate state aid and recapture lag by one year, a practical consequence of the fact that the Comptroller's Office needs this time to conduct their property value study and now the planned audits of appraisal district operations in alternating years. A taxpayer receiving a value limitation pays M&O taxes on the reduced value for the project in years 3-10 and receives a tax bill for I&S taxes based on the full project value throughout the qualifying and value limitation period (and thereafter). The school funding formulas use the Comptroller's property values that reflect a reduction due to the property value limitation in years 4-11 as a result of the one-year lag in property values.

For the school finance system that operated prior to the approval of House Bill 1 (HB 1) in the 2006 special session, the third year was typically problematical for a school district that approved a Chapter 313 value limitation. Based on the data provided in the application, Air Liquide indicates that \$213.0 million in taxable value would be in place in the second year under the agreement. In year three (2013-14) of the agreement, the project is expected to go on the tax roll at \$30 million for M&O taxes or, if applicable, a higher value limitation amount approved by the LPISD Board of Trustees. This difference would result in a revenue loss to the school district in the third year of the agreement that would not be reimbursed by the state, but require some type of compensation from the applicant in the revenue protection provisions of the agreement.

In years 4-10, smaller revenue losses are generally anticipated when the state property values are aligned at the minimum value established by the Board on both the local tax roll and the corresponding state property value study, assuming a similar deduction is made in the state property values. In the case of relatively high-wealth school districts like LPISD, however, the pattern that has emerged is for a relatively constant revenue loss related to the portion of the M&O tax rate that is not subject to recapture, generally the last four cents of the current \$1.04 per \$100 M&O tax rate.

HB 1 established a “target” revenue system per student that has the effect of largely neutralizing the third-year revenue losses associated with Chapter 313 property value limitations, at least up to a district’s compressed M&O tax rate. The additional four to six cents of tax effort that a district may levy are subject to an enriched level of equalization and operate more like the pre-HB 1 system. For a Chapter 41 high-wealth school district, up to six cents above the compressed tax rate are not subject to recapture. A value limitation must be analyzed for any potential revenue loss associated with this component of the M&O tax levy. For tax effort in excess of the compressed plus six cents rate, equalization and recapture occur at the level of \$319,500 per weighted student in average daily attendance (WADA).

Under HB 3646—the school finance system changes approved by the Legislature in 2009—the starting point is the target revenue provisions from HB 1, that are then expanded through the addition of a series of school funding provisions that had operated previously outside the basic allotment and the traditional formula structure, as well as an additional \$120 per WADA guarantee.

Under the provisions of HB 3646, school districts do have the potential to earn revenue above the \$120 per WADA level, up to a maximum of \$350 per WADA above current law. Initial estimates indicate that about 700 school districts are funded at the minimum \$120 per WADA level, while approximately 300 school districts are expected to generate higher revenue amounts per WADA. This is significant because changes in property values and related tax collections under a Chapter 313 agreement once again have the potential to affect a school district’s base revenue, although probably not to the degree experienced prior to the HB 1 target revenue system.

One key element in any analysis of the school finance implications is the provision for revenue protection in the agreement between the school district and the applicant. In the case of the Air Liquide project, the agreement calls for a calculation of the revenue impact of the value limitation in years 3-10 of the agreement, under whatever school finance and property tax laws are in effect in each of those years. This meets the statutory requirement under Section 313.027(f) (1) of the Tax Code to provide school district revenue protection language in the agreement.

Underlying Assumptions

There are several approaches that can be used to analyze the future revenue stream of a school district under a value limitation. Whatever method is used, a reasonable analysis requires the use of a multi-year forecasting model that covers the years in which the agreement is in effect. The Chapter 313 application now requires 15 years of data and analysis on the project being considered for a property value limitation.

The approach used here is to maintain static enrollment and property values in order to isolate the effects of the value limitation under the school finance system. While the new target revenue system appears to limit the impact of property value changes for a majority of school districts, changes in underlying property value growth have the potential to influence the revenue stream of a number of school districts.

Student enrollment counts are held constant at 7,401 students in average daily attendance (ADA) in analyzing the effects of the Air Liquide project on the finances of LPISD. The District's local tax base reached \$5.96 billion for the 2009 tax year. While the district's tax base has experienced volatility in recent years, the underlying \$5.96 billion taxable value for 2009-10 is maintained for the forecast period in order to isolate the effects of the property value limitation. LPISD is a property-wealthy district, with wealth per weighted ADA or WADA of approximately \$657,749 for the 2009-10 school year. These assumptions are summarized in Table 1.

School Finance Impact

A baseline model was prepared for LPISD under the assumptions outlined above through the 2024-25 school year. Beyond the 2010-11 school year, no attempt was made to forecast the 88th percentile or Austin yield that influence future state funding. In the analyses for other districts and applicants on earlier projects, these changes appeared to have little impact on the revenue associated with the implementation of the property value limitation, since the baseline and other models incorporate the same underlying assumptions.

Under the proposed agreement, a second model is established to make a calculation of the "Baseline Revenue" by adding the value of the proposed Air Liquide facility to the model, but without assuming that a value limitation is approved. The results of the model are shown in Table 2.

A third model is developed which adds the Air Liquide value but imposes the proposed property value limitation effective in the third year, which in this case is the 2013-14 school year. The results of this model are identified as "Value Limitation Revenue Model" under the revenue protection provisions of the proposed agreement (see Table 3). An M&O tax rate of \$1.04 is used throughout this analysis.

A summary of the differences between these models is shown in Table 4. The model results show approximately \$58.0 million a year in net General Fund revenue, after recapture and other adjustments have been made.

Under these assumptions, LPISD would experience a revenue loss as a result of the implementation of the value limitation in the 2013-14 school year (-\$70,306). The revenue reduction results from the mechanics of four cents not subject to recapture. It appears that similar differences persist between the two models over the course of the agreement.

One change that has been incorporated into these models is a more precise estimate of the deduction from the property value study conducted by the Comptroller's Office. At the school district level, a taxpayer benefiting from a property value limitation has two property values assigned by the local appraisal district for their property covered by the limitation: (1) a reduced value for M&O taxes, and (2) the full taxable value for I&S taxes. This situation exists for the eight years that the value limitation is in effect.

Under the property value study conducted by the Comptroller's Office, however, only a single deduction amount is calculated for a property value limitation and the same value is assigned for the M&O and I&S calculations under the school funding formulas. The consequence of the lower deduction in the value study relative to the Chapter 313 reduction in the CAD values is that a school district risks not being fully compensated under the school finance funding formulas for having granted the property value limitation. Chapter 41 school districts face greater recapture costs than would have been the case if the CAD deduction and the Comptroller's Chapter 313 reduction matched.

This methodology has been incorporated into these estimates and the typical result is an increase in the hold-harmless formula amounts owed to the school district by the company that receives the value limitation. The extent to which this affects a school district's finances appears to be influenced by the scale of the value limitation reduction relative to the district's underlying tax base, as well as its I&S tax rate.

In the case of LPISD, the calculated lower reduction in the state property value relative to the M&O benefit to be received by the taxpayer does not appear to be substantial. In large part this results because the underlying tax base is substantially larger than the proposed project.

Impact on the Taxpayer

Table 5 summarizes the impact of the proposed property value limitation in terms of the potential tax savings under the property value limitation agreement. The focus of this table is on the M&O tax rate only. As noted previously, the property is fully taxable in the first two years under the agreement. A \$1.04 per \$100 of taxable value M&O rate is assumed in 2010-11 and thereafter.

Under the assumptions used here, the potential tax savings from the value limitation total \$12.5 million over the life of the agreement. In addition, Air Liquide would be eligible for a tax credit for taxes paid on value in excess of the value limitation in each of the first two years. The credit amount is paid out slowly through years 4-10 due to statutory limits on the scale of these payments over these seven years, with catch-up payments permitted in years 11-13. The tax credits are expected to total approximately \$2.0 million over the life of the agreement, with no unpaid tax credits anticipated. The key LPISD revenue losses are associated with the additional four-cent levy not subject to recapture and expected to total approximately -\$477,582 over the course of the agreement, with the school district to be reimbursed by the state for the tax credit payments. In total, the potential net tax benefits are estimated to total \$14.0 million over the life of the agreement.

Facilities Funding Impact

The Air Liquide project remains fully taxable for debt services taxes, with LPISD currently levying a \$0.285 I&S rate. The value of the Air Liquide project is expected to depreciate over the life of the agreement and beyond, but full access to the additional value will add to the District’s projected wealth per ADA that is currently well above what is provided for through the state’s facilities program. The additional value is expected to help reduce the District’s current I&S tax rate to \$0.2447 per \$100 in 2011-12—about four cents of tax effort—with the rate reduction diminishing as the project value depreciates.

The Air Liquide project is not expected to affect LPISD in terms of enrollment. Continued expansion of industrial gas could result in additional employment in the area and an increase in the school-age population, but this project is unlikely to have much impact on a stand-alone basis. As proposed, the Air Liquide project anticipates the addition of 13 permanent full-time jobs once the project becomes operational.

Conclusion

The proposed Air Liquide industrial gas manufacturing project enhances the tax base of LPISD. It reflects continued capital investment in manufacturing, one of the goals of Chapter 313 of the Tax Code, also known as the Texas Economic Development Act.

Under the assumptions outlined above, the potential tax benefits under a Chapter 313 agreement could reach an estimated \$14.0 million over the course of the agreement. This amount is net of any anticipated revenue losses for the District. The additional taxable value also enhances the tax base of LPISD in meeting its future debt service obligations.
